Contents

	Introduction		xi
1	Chain Complexes		1
	1.1	Complexes of R-Modules	1
	1.2	Operations on Chain Complexes	5
	1.3	Long Exact Sequences	10
	1.4	Chain Homotopies	15
	1.5	Mapping Cones and Cylinders	18
	1.6	More on Abelian Categories	25
2	Derived Functors		30
	2.1	δ-Functors	30
	2.2	Projective Resolutions	33
	2.3	Injective Resolutions	38
	2.4	Left Derived Functors	43
	2.5	Right Derived Functors	49
	2.6	Adjoint Functors and Left/Right Exactness	51
	2.7	Balancing Tor and Ext	58
3	Tor and Ext		66
	3.1	Tor for Abelian Groups	66
	3.2	Tor and Flatness	68
	3.3	Ext for Nice Rings	73
	3.4	Ext and Extensions	76

Published online by Cambridge University Press

	3.5	Derived Functors of the Inverse Limit	80
	3.6	Universal Coefficient Theorems	87
4	Homological Dimension		91
	4.1	Dimensions	91
	4.2	Rings of Small Dimension	95
	4.3	Change of Rings Theorems	99
	4.4	Local Rings	104
	4.5	Koszul Complexes	111
	4.6	Local Cohomology	115
5	Spectral Sequences		120
	5.1	Introduction	120
	5.2	Terminology	122
	5.3	The Leray-Serre Spectral Sequence	127
	5.4	Spectral Sequence of a Filtration	131
	5.5	Convergence	135
	5.6	Spectral Sequences of a Double Complex	141
	5.7	Hyperhomology	145
	5.8	Grothendieck Spectral Sequences	150
	5.9	Exact Couples	153
6	Group Homology and Cohomology		160
	6.1	Definitions and First Properties	160
	6.2	Cyclic and Free Groups	167
	6.3	Shapiro's Lemma	171
	6.4	Crossed Homomorphisms and H^1	174
	6.5	The Bar Resolution	177
	6.6	Factor Sets and H^2	182
	6.7	Restriction, Corestriction, Inflation, and Transfer	189
	6.8	The Spectral Sequence	195
	6.9	Universal Central Extensions	198
	6.10	Covering Spaces in Topology	203
	6.11	Galois Cohomology and Profinite Groups	206

7 Lie Algebra Homology and Cohomology 216
7.1 Lie Algebras 216
7.2 $\mathfrak{g}$-Modules 219
7.3 Universal Enveloping Algebras 223
7.4 H^1 and H_1 228
7.5 The Hochschild-Serre Spectral Sequence 232
7.6 H^2 and Extensions 234
7.7 The Chevalley-Eilenberg Complex 238
7.8 Semisimple Lie Algebras 242
7.9 Universal Central Extensions 248

8 Simplicial Methods in Homological Algebra 254
8.1 Simplicial Objects 254
8.2 Operations on Simplicial Objects 259
8.3 Simplicial Homotopy Groups 263
8.4 The Dold-Kan Correspondence 270
8.5 The Eilenberg-Zilber Theorem 275
8.6 Canonical Resolutions 278
8.7 Cotriple Homology 286
8.8 André-Quillen Homology and Cohomology 294

9 Hochschild and Cyclic Homology 300
9.1 Hochschild Homology and Cohomology of Algebras 300
9.2 Derivations, Differentials, and Separable Algebras 306
9.3 H^2, Extensions, and Smooth Algebras 311
9.4 Hochschild Products 319
9.5 Morita Invariance 326
9.6 Cyclic Homology 330
9.7 Group Rings 338
9.8 Mixed Complexes 344
9.9 Graded Algebras 354
9.10 Lie Algebras of Matrices 362

10 The Derived Category 369
10.1 The Category $\mathbf{K}(\mathcal{A})$ 369
10.2 Triangulated Categories 373
10.3 Localization and the Calculus of Fractions 379
10.4 The Derived Category 385
10.5 Derived Functors 390
10.6 The Total Tensor Product 394
10.7 Ext and **R**Hom 398
10.8 Replacing Spectral Sequences 402
10.9 The Topological Derived Category 407

A Category Theory Language 417
A.1 Categories 417
A.2 Functors 421
A.3 Natural Transformations 423
A.4 Abelian Categories 424
A.5 Limits and Colimits 427
A.6 Adjoint Functors 429
